

DJI FLY DRIVE

PORTABLE DRIVE FOR DRONE
FOOTAGE

Data Sheet

Some shots you will, literally, never get a second chance at capturing.

So when it comes to preserving jaw-dropping aerial footage, pros know that efficient, reliable, portable backup is crucial. That's why we partnered with DJI, the leader in drone technology, to bring you the Seagate® DJI Fly Drive. With 2TB of capacity, there's room for more than 60 hours of flights¹—meaning you'll streamline the editing process by storing, consolidating and organizing all that footage in one reliable place.

Pack Less. Lose Less.

With its integrated UHS-II MicroSD card slot and a reversible USB-C cable that tucks securely beneath the bumper, Fly Drive enables you to make fast in-field file transfers to the latest-generation computers without the need for multiple memory cards and card readers.

Work With Confidence.

Fly Drive is enclosed within a durable bumper to help shield your footage from bags crammed with equipment, bumpy dirt roads, accidental drops—you get the idea.

Create Something Lasting.

In the end, it's not about the drone, or the files, or your drive—it's about turning all of it into an experience that's uniquely yours, a perspective you can share with the world. That's why Fly Drive features a complimentary two-month membership to Adobe® Premiere® Pro CC, the industry's leading video editing software.²

¹ Based on DJI battery life of about 20 minutes, 1 hour of 4K 30fps compressed footage creates 30GB of data.

² Fly Drive offers complimentary two-month access to Adobe Premiere Pro CC, redeemable during product registration. Internet connection and Adobe ID required. Available only to users 13 and older. Not available in all countries. See www.adobe.com/legal.html for applicable terms and privacy policy.
